Subject: Attention: Docket ID Number OPP-2003-0010.

### The use of pesticides

This action is far too restrictive and puts a significant hardship on those in the agricultural, grazing and forest products industries. With little benefit that would actually result in a positive effect on any truly Endangered Species but see this as a continuing method to restrict and control the US industry.

The Service has gone far beyond the scope of the original ESA and rather than more regulation they should be reducing the regulation and requirements they currently have.
